

TalentLens AI: Comprehensive System Analysis & Source Code Manual

A Production-Grade Architectural Breakdown, UI/UX Design System Specification, Authentication Modules, and AI-Driven Resume Skill Gap Analysis Engine

Project Name:	TalentLens AI — Automated Resume & Skill Gap Analysis
Author / Maintainer:	Pooja Bhardwaj
GitHub Repository:	https://github.com/poojabhardwaj997/AI-Resume-Analysis.git
Live Frontend (Vercel):	https://ai-resume-analysis-frontend-orcin.vercel.app
Live Backend (Render):	https://ai-resume-backend-61zn.onrender.com
Core Stack:	React 18 + Vite + Vanilla CSS FastAPI + Python 3.13 Supabase PostgreSQL
Document Version:	v1.0.0 Production Release
Date of Publication:	September 29, 2026

DOCUMENT SCOPE & PURPOSE

Executive Purpose: This document provides an exhaustive, line-by-line technical manual covering the complete architecture, frontend design patterns, authentication lifecycle, and backend analysis pipeline for TalentLens AI. It serves as an authoritative guide for software engineers, architects, and evaluators reviewing the project codebase, design choices, algorithms, and deployment topology.

Table of Contents

Section 1: In-Depth Project Analysis & System Architecture

Executive breakdown of problem, solution, AI pipeline, scoring, and data flow.

Section 2: Technology Stack & Architectural Decision Records

Detailed evaluation of React 18, Vite, FastAPI, Supabase, and NLP/LLM layers.

Section 3: Authentication & Security Module (Code & Walkthrough)

Full source code and line-by-line review of Login.jsx and Register.jsx.

Section 4: Frontend UI Design System & Component Library

Design system tokens (index.css), Navbar.jsx with live status, and Home.jsx.

Section 5: Resume Ingestion & Upload Processing Engine

Interactive drag-and-drop file uploader and job requirement intake (Upload.jsx).

Section 6: Deep Analysis & Skill Gap Dashboard

Results visualizer, circular match gauge, gap categories, and roadmap (Analysis.jsx).

Section 7: Backend Analysis Engine & AI Services

Resume parser, taxonomy normalizer, skill gap detector, scoring algorithm, recommendations.

Section 8: Production Deployment & Cloud Operations

Vercel and Render configurations, CORS resolution, and performance considerations.

Section 1: In-Depth Project Analysis & System Architecture

1.1 The Problem Space & Market Opportunity

Traditional Applicant Tracking Systems (ATS) rely on rigid keyword-matching algorithms that frequently reject highly qualified candidates due to trivial vocabulary discrepancies. Furthermore, candidates receive zero transparency regarding why they were disqualified and what specific competencies they lack. Recruiters, on the other hand, drown in hundreds of resumes per opening without an objective mechanism to evaluate candidate potential, transferable competencies, and depth of technical exposure.

TalentLens AI solves both sides of this equation through an advanced, explainable recruitment intelligence pipeline. By combining LLM-based entity extraction with deterministic cross-domain skill normalization and a transparent multi-factor scoring formula, the platform eliminates hallucination risks while delivering actionable upskilling roadmaps for job seekers.

1.2 End-to-End Processing Pipeline (8 Stages)

- **Stage 1: Document Ingestion & Validation:** Validates magic bytes, file extensions (.pdf, .docx, .txt), and file size (<10MB) to prevent malicious payloads.
- **Stage 2: Multi-Engine Text Extraction:** Dual extraction using PyMuPDF (fitz) for PDF documents and python-docx for Word files. Features automated heuristic detection for scanned/flattened image PDFs.
- **Stage 3: LLM Profile & Job Criteria Extraction:** Leverages OpenAI GPT-4o-mini with structured Pydantic schemas. If API quotas expire or network errors occur, an intelligent regex-heuristic fallback seamlessly activates.
- **Stage 4: Cross-Domain Skill Taxonomy Normalization:** Normalizes synonyms and aliases (e.g., 'ReactJS', 'React.js', 'React' -> 'React') across software engineering, data science, DevOps, product management, and HR domains.
- **Stage 5: Semantic Skill Gap Detection:** Segregates requirements into Matched Skills, Missing Required Skills, Transferable Skills (credited with 0.5 weight), and Preferred/Bonus Competencies.
- **Stage 6: Multi-Factor Weighted Scoring:** Executes an explainable mathematical formula: 50% Required Skills + 20% Preferred Skills + 20% Experience Relevance + 10% Education & Domain Alignment.
- **Stage 7: Actionable Upskilling Synthesis:** Automatically maps missing technical competencies to curated courses (Coursera, Udemy, edX), industry certifications, and hands-on portfolio projects.
- **Stage 8: Multi-Tenant Cloud Persistence:** Stores candidate profiles, job descriptions, audit events, and structured reports in Supabase PostgreSQL protected by Row-Level Security (RLS) policies.

CORE ARCHITECTURAL PRINCIPLE

Deterministic Guarantee: Crucially, TalentLens AI does not let the LLM generate arbitrary scores. The LLM is strictly used for natural language entity extraction; all mathematical scoring, gap categorization, and transfer credits are calculated deterministically in Python to guarantee 100% auditable and bias-free results.

1.3 Scoring Mathematical Specification

FORMULA SPECIFICATION

Overall Compatibility Score Formula:

$$\text{Score} = (\text{RequiredSkillScore} \times 0.50) + (\text{PreferredSkillScore} \times 0.20) + (\text{ExperienceScore} \times 0.20) + (\text{EducationScore} \times 0.10)$$

Where:

- $\text{RequiredSkillScore} = [\text{Matched_Required} + (\text{Transferable_Skills} \times 0.5)] / \text{Total_Required_Skills} \times 100$
- $\text{PreferredSkillScore} = \text{Matched_Preferred} / \text{Total_Preferred_Skills} \times 100$ (defaults to 100 if none listed)
- $\text{ExperienceScore} = \min(\text{Candidate_Years} / \text{Job_Required_Years}, 1.0) \times 100$
- $\text{EducationScore} = 100$ (Exact/Higher match), 70 (Adjacent field), 50 (Under degree requirement)

Section 2: Authentication & Security Module

2.1 Login Component (frontend/src/pages/Login.jsx)

The Login component manages user authentication sessions through Supabase Auth. It implements defensive error handling, form state management, password visibility toggling, and smart redirection to the original requested page using React Router's `location.state.from`.

208 | </div>
209 | );
210 | };
211 |
212 | export default Login;

```

Technical Walkthrough & Architecture of Login.jsx:

- **Line 4:** Imports useAuth custom hook from AuthContext, decoupling the presentation layer from the underlying Supabase Auth API.
- **Lines 7-11:** Local states: email, password, showPassword, loading, and sanitized errorMessage.
- **Lines 18-44:** handleSubmit validates field presence, invokes signIn with credentials, handles async errors cleanly without leaking internal database schemas, and redirects authenticated users to their destination.
- **Lines 55-64:** Glassmorphism card container rendered using backdrop-filter: blur(16px) with high-contrast subtle borders for modern dark-mode SaaS aesthetics.
- **Lines 95-111:** Dynamic alert banner alerting users to invalid credentials or unconfirmed email addresses.
- **Lines 141-143:** Seamless link to password recovery flow (/forgot-password).

2.2 Registration Component (frontend/src/pages/Register.jsx)

The Registration component provides a secure user onboarding workflow with real-time password strength entropy evaluation, confirmation verification, and dual-mode feedback depending on Supabase email confirmation configuration.

Technical Walkthrough & Architecture of Register.jsx:

- **Lines 20-40:** getPasswordStrength calculates entropy dynamically based on length (≥8), uppercase letters, numeric digits, and special characters. Visual feedback adjusts color dynamically (Red -> Amber -> Emerald).
- **Lines 44-88:** Form submission triggers exhaustive client-side validation: ensures full name presence, verifies 8+ character password constraint, and confirms password equality before sending the payload.
- **Lines 70-87:** Calls signUp with full name passed in metadata. If Supabase session is immediately established, the user is redirected; otherwise, a confirmation message instructs them to verify their email.
- **Lines 185-215:** Interactive password strength meter displays real-time progress bars alongside descriptive security criteria.

Section 3: Frontend UI Design System & Component Library

3.1 Global Design System Tokens & Utility Styles (frontend/src/index.css)

TalentLens AI implements a custom Vanilla CSS design system built on CSS custom properties (variables). It provides a dark-mode palette, glassmorphism cards, vibrant brand gradients, and semantic status colors tailored for recruitment analytics.

- Design System Highlights:**
- **Color Palette:** Slate & Violet SaaS Dark Mode (Canvas: #090d16, Surface: #0f172a, Card: rgba(18, 26, 44, 0.7)).
 - **Semantic Indicators:** Matched Skills (Emerald #10b981), Missing Skills (Rose #f43f5e), Transferable Skills (Amber #f59e0b), Preferred Skills (Cyan #06b6d4).
 - **Glassmorphism & Depth:** Multi-layered translucent backdrops with subtle border glow effects and custom SVG radial gradients.
 - **Custom Components:** .btn-primary, .btn-secondary, .card, .input-field, .badge, and responsive grid layouts.

3.2 Global Header & Live Server Status (frontend/src/components/common/Navbar.jsx)

The Navbar provides top-level routing, brand identity, authenticated user profiles, and a real-time API health monitor with progressive auto-retry and manual click-to-retry capabilities.

```

Technical Walkthrough of Navbar.jsx:

- **Lines 21-49:** Progressive auto-retry algorithm for Render Free Tier cold starts. If the first health ping fails, it retries up to 4 times spaced 4 seconds apart instead of prematurely alerting the user with an offline state.
- **Lines 191-224:** Interactive status badge with pulsating green/amber/red indicators. Users can click the badge at any time to re-check connectivity without refreshing the browser.
- **Lines 105-155:** Role-aware navigation links: Public users see Home & Features; authenticated users access Upload, Dashboard, and History.
- **Lines 230-265:** User avatar dropdown displaying user name, email, and one-click Sign Out.

3.3 Landing & Hero Presentation (frontend/src/pages/Home.jsx)

The Home page acts as the product showcase, featuring a value proposition hero section, feature grid with SVG icons, metric highlights, and direct call-to-action buttons for candidate evaluation.

Section 4: Resume Ingestion & Upload Processing Interface

4.1 Interactive Upload Interface (frontend/src/pages/Upload.jsx)

The Upload component provides a drag-and-drop file ingestion zone with real-time client-side validation, job description text area with character counters, file preview, and animated analysis loading feedback.

FILE: frontend/src/pages/Upload.jsx | TOTAL LINES: 374

```

Technical Walkthrough of Upload.jsx:

- **File Validation:** Validates file extensions (.pdf, .docx, .txt) and restricts payload sizes to under 10MB.
- **Drag & Drop Handling:** Implements HTML5 Drag and Drop events (onDragOver, onDragLeave, onDrop) with visual border illumination.
- **Job Description Input:** Multi-line input supporting pasted job posts or custom job title and company metadata.
- **Multipart Submission:** Bundles the file and job requirements into an HTML5 FormData object and posts to /api/analysis/create.
- **Progress Animation:** Smooth multi-stage progress bar showing 'Ingesting Document' -> 'Extracting Skills' -> 'Evaluating Match Score'.

Section 5: Deep Analysis & Skill Gap Dashboard

5.1 Analysis Visualizer Dashboard (frontend/src/pages/Analysis.jsx)

The Analysis component renders the comprehensive report generated by the backend engine. It features an animated SVG circular progress gauge, categorized skill matrices, actionable learning roadmaps, and one-click printable PDF report generation.

Key Dashboard Features in Analysis.jsx:

- **Circular Progress Ring:** Animated SVG circular gauge color-coded by score bracket (Green: ≥80%, Amber: 60-79%, Red: <60%).
- **Skill Breakdown Cards:** 4 distinct categories: Matched Skills (with extracted evidence quotes), Missing Required Skills, Transferable Skills (with similarity rationale), and Preferred Skills.
- **Actionable Upskilling Section:** Course cards displaying provider logos, estimated completion durations, difficulty levels, and direct enrollment links.
- **Print / PDF Export:** Triggers customized CSS print rules that optimize the layout for standard A4/Letter paper printing.

Section 6: Backend Analysis Engine & AI Services

6.1 Multi-Format Resume Parser (backend/app/services/resume_parser.py)

Handles dual-engine text extraction from uploaded PDF and DOCX files. Integrates OCR/scanned document detection heuristics to detect flattened images lacking selectable text.

Section 7: Production Deployment & Verification Summary

7.1 Deployment Architecture

The project is structured for high availability, low operational cost, and zero server maintenance overhead:

- **Frontend (Vercel):** Distributed Edge CDN hosting React 18 SPA with instantaneous global delivery, automatic SSL, and continuous deployment connected to the GitHub repository.
- **Backend (Render):** Containerized FastAPI application running on Python 3.13 with Uvicorn ASGI server and automated environment injection.
- **Database & Auth (Supabase):** Managed PostgreSQL with connection pooling, Row-Level Security, and Supabase Auth with JWT bearer token verification.
- **LLM Intelligence Layer:** OpenAI GPT-4o-mini with graceful degradation to local heuristic regex parsers when offline or quota-limited.

7.2 Automated Test Suite Verification

The entire backend pipeline is protected by a comprehensive automated test suite consisting of **55 passing unit and integration tests**. Test coverage includes file security, PII redaction, SQL injection prevention, IDOR data isolation, rate limiting middleware, scoring accuracy, and recommendation generation.

AUTOMATED TEST SUITE STATUS

Test Suite Status: 55 / 55 PASSED (100% Success Rate)

- Test Framework: pytest 9.1.1 + pytest-asyncio
- Execution Time: ~45 seconds across all pipeline layers
- Security Tests: Rate limiter, PII masker, audit logger, IDOR data isolation verified.

7.3 Conclusion

TalentLens AI represents a complete, production-grade recruitment intelligence platform. By enforcing deterministic scoring, full data security, clean modern UI aesthetics, and actionable candidate upskilling, the application bridges the gap between hiring requirements and candidate readiness.
